Art Unit: 2827

This application contains claims directed to the following patentably distinct species of the claimed invention: The species wherein the chip is a memory chip, an analog signal processing chip, and a digital signal processor.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from the species wherein the chip is a memory chip, an analog signal processing chip, and a digital signal processor for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 6, 10, 18, 25, 31 and 38 are generic to the species wherein the chip is a memory chip, an analog signal processing chip, and a digital signal processor.

This application contains claims directed to the following patentably distinct species of the claimed invention: The species wherein the conductive structure is copper and a copper alloy.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from the species wherein the conductive structure is copper and a copper alloy for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 6, 10, 18 and 25 are generic to the species wherein the conductive structure is copper and a copper alloy.

This application contains claims directed to the following patentably distinct species of the claimed invention: The species wherein the non-structural component is fabricated from carbon and photoresist.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from the species wherein the non-structural component is fabricated from carbon and photoresist for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 10 is generic to the species wherein the non-structural component is fabricated from carbon and photoresist.

This application contains claims directed to the following patentably distinct species of the claimed invention: The species wherein the post structure is fabricated from silicon dioxide and polyimide.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from the species wherein the post structure is fabricated from silicon dioxide and polyimide for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 31 is generic to the species wherein the post structure is fabricated from silicon dioxide and polyimide.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
